

Prints are available on glossy, matte, lustre or Metallic photographic paper.

### **Lustre**

Lustre prints offer the best of both worlds: the color saturation of glossy, the fingerprint resistance of matte and without the glare associated with glossy.

### **Metalic**

Metalic finish offers a glossy finish and unique metallic appearance, these prints have extra visual interest and depth.

This paper uses a proprietary combination of film laminate layers that produce striking, three-dimensional, lasting images on an ultra-bright background. The effect is sometimes described as "chrome on paper."

You'll see extreme sharpness, brightness, and color saturation with an intense black density that increases its appeal. The proprietary laminate layers also increase the durability and tear resistance of the final print, increasing the opportunities for display applications.

### **Rolled Canvas**

Printed on heavy duty PremierArt Water Resistant Canvas, then finished with a Giclee Satin Matte Clear Coat for UV and water resistance. Your rolled canvas will come with extra canvas on the edges to provide many framing options. They ship rolled, in very sturdy tubes.

### **Mounted Canvas**

Printed on heavy duty PremierArt Water Resistant Canvas, then finished with a Giclee Satin Matte Clear Coat for UV and water resistance.

The canvas is stretched and then wrapped over a wooden frame. Your photo extends to cover the sides of the frame for a beautiful presentation.

*Note : Since the outer edge of your photo will be used for the sides of the frame, not all of your photo will be visible when an admirer views it from the front.*
